Orientation & Training

PERSONAL PROTECTIVE EQUIPMENT

Care, Use Maintenance & Limitations

Prepared by the Alberta Food Processors Association

Safety Glasses

Safety eyeglasses are a necessary protective wear at various times in your work area. All safety eyewear should be marked CSA approved, a mark of compliance and made from polycarbonate protective lenses. Safety eyewear must be worn properly, adequately maintained, and used in conjunction with engineering or admin controls, and your existing company safe work practices / procedures. Most lenses provide 99.9% protection from UVA, UVB rays.

Objective

To reduce or eliminate eye related injuries.

Means

Through increased awareness to identified workplace hazards, appropriate protective eyewear training, and worn for eye protection when required for the task(s).

Comfort

The better it fits the better it protects, the better it ensures being worn. You may experience short-term discomfort when first wearing safety eyewear, so selection of fit for comfort is therefore very important.

Note: it's simply a 'myth' and not true that safety glasses distorts vision/hurt your eyes.

Checklist Inspect regularly for damage, scratches (limitations), etc. replace lenses if required, replacement lenses are quick and easy to change. Do Not modify in any manner that would compromise the intended protection. Primary* Eyewear Do Not use ammonia, alkaline cleaners, or any abrasive Safety glasses, goggles cleaners on protective eyewear. *Primary - First in order, first in importance, fundamental Nose bridge must fit the facial profile, with no gaps and should be snug, close fitting. Secondary⁺ Eyewear Face shields, welding helmets Adjust temple lengths and lens inclination for your best comfort. *Secondary - Next after the first in order, subsidiary or auxiliary Clean regularly with mild soap and warm water. Keep eyewear in a box, plastic bag, or some type of protective storage container. Limitations-as per style, manufacturer's specifications with the original package.

Don't take chances with your sight

Steel Toe Boots / Shoes

CSA, class 1 approved steel toe boots / shoes are mandatory protective wear at all times, for any shop / maintenance personnel, or in any areas as noted by your company policy. Footwear must be worn properly, including lacing, maintained and used in conjunction with engineering controls, and your existing company safe work practices / procedures.

Objective

To reduce or eliminate foot related injuries.

Means

Through increased awareness to identified workplace hazards, appropriate protective footwear training, and worn for foot protection when required for the task(s).

Comfort

The better they fit – the better they protect, the better it ensures their being worn.

Checklist

Inspect boots / shoes regularly for cracks, wear or damage, which could compromise the protective capacity

Do Not use boots / shoes as a hammer, wedge, or as a replacement for a proper tool.

Do Not modify the boots / shoes in any manner that would compromise the intended protection.

Clean periodically, as is practical, to prevent the build up of any foreign material on the boots / shoes.

Store protective footwear in a clean, dry area.

Safety boots/shoes only protect the toes, not necessarily the instep or metatarsals.

Special Note
There should be a small 'green' tag on your footwear to ensure CSA approved.

Hearing Protection

Hearing protection may be 'mandatory' for a number of tasks and locations within your organization, and is recommended at all times for your personal hearing protection. Hearing protection must be worn properly, maintained and used in conjunction with engineering controls, and your existing company safe work practices / procedures.

Objective

To reduce or eliminate hearing related injuries (lost hearing does not return).

Means

Through increased awareness to identified workplace hazards, appropriate hearing protection training, and worn for hearing protection when required for the task(s).

Comfort

The better they fit – the better they protect.

Checklist

Ear plugs or muffs can be washed with mild soap and warm water, left to dry for re-use.

Dispose of all used ear plugs into the proper waste receptacles.

Potential for skin/ear infections. Muffs/plugs reduce more hi frequency than low.

Roll plugs between thumb and fore finger.

Reach behind your head and gently pull ear back to fully open the ear canal.

Insert plug securely, hold in place until plug fully expands.

Hard Hats

Hard hats are a necessary protective wear for various tasks, or as may be required in specific work areas / sites. Hard hats must be worn properly, brim forward, maintained and used in conjunction with engineering controls, and your existing company safe work practices / procedures.

Objective

To reduce or eliminate head related injuries.

Means

Through increased awareness to identified workplace hazards, appropriate training, and worn for head protection when required for the task(s).

Comfort

Compliance, the better it fits – the better it protects, the better it ensures being worn.

Checklist Do Not cut the tension bands or side impact protection inside the hard hat. Inspect your hard hat regularly for cracks, breaks, chips which could compromise the intended personal protection. (Exchange if required) Do Not drop or throw hard hats or intentionally compromise its overall protection capacity. Do Not affix any glued stickers to hard hats. (1st aider ID sticker exempted) Do Not drill any vent holes into the hard hat. Store hard hats in a clean, dry area with protection from damage. Hard hats can be adjusted to fit your head, and should be snug and secure. Wash hard hat periodically with mild soap and warm water, let dry. May not provide proper protection for impact from side, front, or back of head.

Respirators & Dust Masks

Respirators are mandatory protective wear for the various tasks where company employees perform work in an environment where airborne particles, substances, or atmospheric conditions may cause harm. Your company will provide respirators to workers in such specific work environments to reduce the employee exposures to airborne contaminants. Respirators must be worn properly, fit tested# on a regular basis, properly maintained and used in conjunction with engineering controls, and your existing company safe work practices / procedures.

When determined that respiratory protection is required, an Industrial Hygienist or similar qualified individual should be contacted to schedule and conduct regular fit testing of the respiratory equipment with those employees who will use respirators.

Objective

To prevent employee exposures to harmful airborne contaminants.

Means

Through increased awareness to identified workplace hazards, appropriate respiratory protection training, and the proper use of respiratory protective equipment.

Comfort

The better it fits – the better it protects, the better it ensures being worn properly.

Respiratory Protective Equipment Code of Practice

- Paint / Body Shops
- Associated Facilities / Shops
- General Maintenance Shops
- High Risk areas identified and specific to an organizations operational needs

The Code of Practice should be reviewed with employees prior to any respirator use, (and on a regular basis thereafter) as the Code will contain important information on employee responsibilities, proper use of the respirator equipment, cleaning, inspection, sanitizing, limitations and maintenance of the equipment. Part of due diligence.

Care, Use, Limitations & Maintenance

Disposable Dust Masks

Dust masks, also known as filter masks, are used to prevent the inhalation of large particles, dust, or irritants when working in dusty areas or workplaces.

Disposable Dusk Masks

- Only CSA or NIOSH approved dust masks are to be used
- Ensure an adequate (snug) seal around both the mouth and nose
- Dispose of all used dust masks in the proper waste receptacles after use

COVID PPE (as based on AHS/Provincial requirements for minimum workplace compliance)

- Proper COVID approved protective face masks-to go with all other required PPE
- Hand sanitizer stations, wipes, bottles, wash stations with disinfectant soap, etc.
- Proper waste disposal for cleaning and sanitizing materials, ie: wipes, tissues, etc.

Legend

**SDS = Safety Data Sheets (part of WHMIS++)

PPE - Personal Protective Equipment, effective 2020 - COVID considerations

CSA - Canadian Standards Association

⁺GHS - Global Harmonized System (replaces WHMIS 1988)

++WHMIS 2015 – Combined WHMIS/GHS standard, including updated symbols, documentation, and MSDS, becomes SDS
